PROFILE

Frontend developer and founder of NextApps, a small digital product studio. Builds fast, responsive, user-centric web apps with React, Next.js and TypeScript, and goes full-stack with Node.js, PostgreSQL and Docker when the product needs it. Focused on Persian-first, right-to-left products with careful interaction detail.

SELECTED PROJECTS

Dofixo · SaaS product 2026

A hosted platform for small phone, laptop and appliance repair shops. Each workshop signs up, gets an isolated workspace and runs everything from device intake to invoicing and profit reports.

- Tenant isolation is enforced twice: a Prisma extension injects the workspace id into every query, and PostgreSQL row-level security policies back it up independently.
- The workspace id travels from the verified JWT through AsyncLocalStorage into set_config, never from a request body.

React 19 · TypeScript · Node.js · Express 5 · PostgreSQL · Prisma · Tailwind CSS 4 · Docker · Astro

Finora · Open-source product 2026

A Persian-first finance manager for households: right-to-left, on the Jalali calendar, and self-hosted so the data never leaves your machine.

- Balances are always derived from transactions, never typed in, and transfers are never counted as spending.
- Loans with automatic instalment schedules, recurring payments, budgets with rollover, savings goals and asset price history that never rewrites the past.

Next.js · TypeScript · Prisma · PostgreSQL · Radix UI · Tailwind CSS · GSAP · Three.js · Recharts · Docker

NextApps · Founder · Studio website 2026

NextApps is the small product studio I founded. We build websites, online stores, web apps and SaaS products; Dofixo and Finora are part of our work.

- Case studies, services, pricing and blog sections, all in Persian and RTL.
- Built with Next.js and TypeScript.

Next.js · TypeScript · Tailwind CSS

SieManage · Full-stack app 2025

A task management system where managers assign and track work and employees see their day at a glance, with real-time notifications and bilingual Persian/English UI.

- JWT authentication with Manager and Employee roles.
- WebSocket notifications for new assignments, status changes, approaching deadlines and overdue tasks, driven by scheduled jobs.

React · Node.js · Express · PostgreSQL · Socket.io · Tailwind CSS · i18next · Docker · Nginx

Siemenspart · Client website 2026

Website for a team that repairs and supplies genuine Siemens and Heidenhain parts for industrial CNC machines, with a searchable product catalogue and articles.

- Client-side fuzzy search across the catalogue with Fuse.js.
- Product and article pages generated from content at build time, with a sitemap.

Astro · React · TypeScript · Tailwind CSS · Fuse.js

DashStack · Open-source template 2025

A feature-rich admin dashboard built with React, Material UI and Tailwind CSS v4: charts, calendar, data grids, e-commerce and user pages.

- Interactive charts with ApexCharts and KPI cards.
- Calendar with recurring events (RRule) and month, week and day views.

React · Material UI · Tailwind CSS 4 · ApexCharts · React Big Calendar · React Router

SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, Redux, React Router
Mobile	React Native
Styling	Tailwind CSS, Material UI, Radix UI, Sass
Motion	GSAP, Framer Motion, Three.js
Backend	Node.js, Express, Prisma, Socket.io, Zod
Database	PostgreSQL, MongoDB
DevOps	Docker, Nginx, Caddy, Git, GitHub
Also	Astro, Vite, Firebase

EDUCATION

Software Engineering graduate
